What can broadband do for the health care industry?

Health care is becoming more and more dependent on computers and the internet to deliver and manage patient care. Small practices often don’t have the expertise or resources in-house to take advantage of all that technology can offer. Through PennTAP’s Health Care IT/Broadband Initiative, Penn State experts can help your organization “tune up your technology” to prepare you for health care IT adoption. Broadband connections (high speed internet connections) and healthcare IT facilitate:

- improved health care quality and patient outcomes
- increased practice efficiency (driving down costs)
- increased reimbursements
- eligibility for Medicare EHR Incentive payments
- management of your online presence via website and social media sites
- telemedicine solutions
- electronic health records
- online/remote patient record storage

PennTAP’s FREE technology assessments can help your organization:

- determine what type of internet connection is best for you
- ensure that you are getting the best value for the service you select
- manage your online presence
- complete an assessment of your website or help you set one up
- make software and hardware recommendations to improve office efficiency, and many other possible projects.

Our Technology Tune-Ups are available to any type of health care facility, private practice office, hospital, nursing home, chiropractic office, specialty care hospital, dental office, etc.

Why PennTAP?

PennTAP, an unbiased source of technical assistance, has successfully assisted hundreds of Pennsylvania businesses with computer information technology issues, them with resources both within and external to the University for further assistance.

Providing technical assistance to Pennsylvania business and industry
