Worker Safety: A Priority at Scot Lubricants

The Need:

Scot Lubricants, a manufacturer of lubricants for cars, industrial, and other heavy-duty equipment, had a need to ensure a safe workplace since moving to their new building near Allentown. They requested unbiased assistance in evaluating their worker safety program. Their objective was to provide leadership and resources in carrying out their health and safety program.

The PennTAP Connection:

Their Safety Coordinator contacted a PennTAP EHS Technical Specialist who could help review their current plan and to guide them to an effective program for both employee safety and OSHA compliance.

The Project:

The PennTAP EHS specialist visited Scot Lubricants and reviewed their current policies and observed their practices. After several visits, a new program was discussed to ensure proactive tasks to identify unsafe working conditions. PennTAP suggested a proactive approach of training, written plans, and strategies to identify unsafe working practices. PennTAP reviewed new plans, provided templates for new programs, and coached workers in training techniques.

The Outcome:

Scot Lubricants developed new programs to ensure health and safety in the workplace. New policies were written to help the facility maintain compliance with Occupational Safety and Health Administration (OSHA) and to keep workers safe. Clear responsibilities were assigned for various aspects of their health and safety program. In addition, adequate resources were provided to complete assignments and to ensure continuous success.

“PennTAP has always been willing to assist us with anything we have asked.”

Total economic benefits report of $45,700.
